

## **Explanation of grades.**

This spreadsheet presents the midterm and combined assignment scores we have as of 11/25/07, before any weight factors have been applied. Your quiz grade is as it appears in the online gradebook. This information is being supplied so you can see where you stand, not as an indication of your final grade. Your final grade will be calculated using the weight factors given in the syllabus, and there will be a curve.

The "combined assignment score" is based on the following:

1. Most people handed in 5 workbook chapters. For those who have handed in  $\# \geq 5$  chapters, I would give them 10 marks. For  $\# < 5$ , I give  $(\# / 5 * 10)$ .
2. I have downloaded the gradebook from the online assignment webpage, I give full marks (10) for those people got greater than half total score. And I scale (using ratio) for those who did less.
3. The combined score would be the maximum of these two score. Therefore most people get full score (10). Those people got lower score ( $< 5$ ) did not hand in enough workbook pages AND did not do enough online assignments.
